Professional Summary

I am a full stack developer with a passion for creating web applications. I am currently a Senior at Brigham Young University Idaho studying Software Engineering. I have experience with React, ChakraUI, Typescript, Express, MongoDB, and more, with a knack for creativity. I am always looking for new opportunities to learn and grow as a developer while also bringing valuable work and experience to your team.

Beyond software, I am also the Founder and Owner of Lucent Home Services, a home services company I built from the ground up to multiple six-figure annual revenue. Starting with nothing but an idea and a strong work ethic, I developed every system that runs the business, from client acquisition and sales pipelines to team management, financial planning, and operational infrastructure. I have hired and led a team of field technicians, built a loyal and recurring client base, and maintained profitability through every stage of growth. Running Lucent has sharpened my understanding of what it takes to build something real: ownership, discipline, strategic thinking, and the ability to execute across every layer of an organization. I bring that same mindset into my work as a developer, I don't just write code, I think about the bigger picture, the user, the business impact, and what it actually takes to deliver something that works.

Work Experience

Founder & Owner

Lucent Home Services Orem, UT April 2025 to Present

Founded and scaled a home services company from the ground up, growing to multiple six-figure annual revenue while maintaining full operational and strategic ownership across every aspect of the business.

- Designed and built all core business infrastructure from scratch, including client acquisition systems, service delivery workflows, pricing strategy, and quality control processes.
- Recruited, hired, and managed a team of field technicians, establishing labor infrastructure, training protocols, and accountability systems that enabled consistent and scalable service delivery.
- Developed a diversified, recurring client base through outbound sales, referral programs, and relationship-driven account management, driving predictable revenue and long-term retention.
- Owned all financial planning and reporting, including budgeting, forecasting, payroll, and P&L management, maintaining profitability through controlled growth.
- Led all marketing initiatives including digital presence, local advertising, and brand identity, resulting in measurable year-over-year growth in new client acquisition.
- Demonstrated full-cycle entrepreneurial ownership across sales, operations, hiring, vendor relationships, and strategic planning, building a sustainable and profitable business without outside investment.

AI Trainer

Cartwheel New York, NY June 2024 to January 2025

At Cartwheel AI, I was responsible for labeling and annotating large datasets of motion capture and animation data to support the training of AI models. My work focused on ensuring data accuracy and consistency, which contributed to improving the performance of AI-generated 3D animations. I collaborated with the AI development team to meet project requirements and maintained high-quality standards throughout the data preparation process.

Junior Software Developer

CorEMR Inc. Orem, UT April 2024 to October 2024

As a development intern, I contributed to enhancing CorEMR's server-side rendered Electronic Medical Records web application by implementing improvements and integrating user feedback. I led a side project to develop a comprehensive Selenium pipeline for automating QA testing, streamlining the testing process and improving reliability. Additionally, I worked closely with the support team to integrate customer-suggested improvements, ensuring the application continuously evolved to meet user needs.

Skills Acquired/Improved:

- JavaScript
- PHP
- SQL
- HTML/CSS
- Front-End Frameworks
- Bash
- Selenium

Software Engineer Intern

Capital Insurance Group, LLC. Roseville, CA April 2023 to September 2023

As a software engineering intern, I collaborated with a team of developers using the SCRUM methodology to improve automation processes. My primary project focused on streamlining the update of user tax information, which was previously a manual process. I designed and implemented a Jenkins pipeline to automate data retrieval and transformation, ensuring updated tax information was processed efficiently and made accessible to users in real time. This automation significantly improved workflow efficiency and accuracy, reducing the need for manual intervention and enhancing the overall user experience.

Skills Acquired/Improved:

- APIs
- JavaScript
- Python
- SQL
- Bash
- Jenkins (Pipelines, CI)

Video Editor

Eye of the Tiger News Roseville, CA August 2017 to June 2021

I worked as a video editor for 4 years through a program run through my school. I edited and produced many packages for them over 4 years. <https://eyeofthetigernews.com/>

Missionary

The Church of Jesus Christ of Latter-day Saints Roswell, GA June 2021 to October 2021

I was a missionary for the Church of Jesus Christ of Latter-day Saints. I lived in Georgia working to find, contact, and invite as many as we could to hear a message. We would be working from 6:30am to 9pm. Some of the work included going door to door, finding referrals, and contacting those we found who were interested. This full-time commitment taught me many lessons in work ethic and leadership.

Education

Bachelor's Degree (In-Progress) in Software Engineering

Brigham Young University-Idaho Rexburg, ID January 2022 to Present

Through coursework and hands-on projects, I gained experience in software development, web applications, and automation. I will be graduating with the certificates: Full-Stack Development and Software Management. The project I am most proud of is this portfolio site! It is built with React, TypeScript, and Chakra-UI. I built server-side rendered web apps as well, including a wedding videography platform and a car sales site, strengthening my skills in JavaScript, HTML/CSS, APIs, and MVC frameworks. I also developed a Python game using Pygame to test reaction speed, improving my understanding of game loops and algorithm efficiency. Additionally, I created a C#-based program for home cooks to manage recipes, track inventory, and generate meal suggestions, reinforcing my knowledge of software architecture and data management.

High School Diploma

Roseville High School Roseville, CA August 2017 to June 2021
